DEER FENCE

**SAFER THAN METAL
WILL NOT RUST**

Deer Fence 7' x 100' Installation Instructions

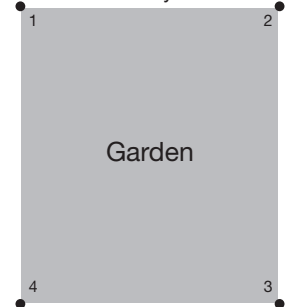

Accessories Required

- 11 stakes/posts (recommended 8' long)
- 44 cable ties (4"-6" long)

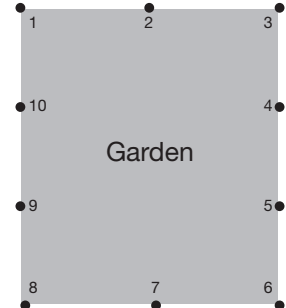

For Square / Rectangular Gardens

1. Place one recommended 8' stake/post outside each corner of your garden. Insert them into the ground to a depth of 12".
2. Continue to insert stakes/posts evenly around the perimeter of your garden at the same depth as above, with no stake being any more than 10' apart from another.
3. Attach the leading edge of the black deer fence to the first stake using cable ties. For best results, ensure that the ties are tied securely at the top and bottom and evenly spaced along the 7' length of the upright stake/post. Repeat for each stake as you unroll the deer fence around the perimeter of your garden.
4. To build a gate, once all of the upright stakes/posts are tied to the fence, (but not tied back to your first stake/post) take one extra stake/post and stake it into the ground directly beside the first stake. Finish the enclosure by attaching the remaining fence to the last stake. You should now have a simple gate through which you can access your garden.
5. Smaller animals can be deterred by securing the base of the fence to the ground. Use fence staples every 5 feet around the perimeter of the fence.
6. Enjoy your garden!
